

POSTTRAUMATIC STRESS DISORDER

SHERIFF TIMOTHY WHITCOMB

PTSD

What is it?

- Is a psychiatric disorder that can occur following the experience or witnessing of life-threatening events such as military combat, natural disasters, terrorist incidents, serious accidents, or violent personal assaults like rape.
- Most survivors of trauma return to normal given a little time. However, some people will have stress reactions that do not go away on their own, or may even get worse over time.
- These individuals may develop PTSD.

Military

- Civil War – Soldiers Heart
- WWI – War Neurosis/Shell Shock
- WWII – Combat Fatigue Syndrome
